

HOW TO: Execute the Expense Report APP SQL Script

Intent:

This document outlines how to deploy the accompanying Expense Report App SQL script.

NOTE:

While Xalt is providing instruction on how to import and execute the included SQL scripts Hexagon, Xalt, Catavolt, take no responsibility for lost, corrupted, overwritten, or otherwise unintended data changes, due to incorrect or incomplete execution of the included instructions.

We HIGHLY recommend a Database Administrator complete these steps.

Step 1.

How to Deploy **1-expense_report_schema.sql**:

1. Right-click the destination database and select **New Query**. Or, from the **File** menu select **New Query**.
2. Open **1-expense_report_schema.sql** in notepad or your preferred text editor, select all and copy the contents in its entirety.
3. In the Query Editor window Right-click anywhere in the Query Editor and paste the contents **1-expense_report_schema.sql** into the Query Editor Window and click Execute.

Once all of these objects are imported, we will be ready to import the Expense Report App import package into Xalt Cloud Server.

OPTIONAL:

Step 2:

Another SQL Script, **2-expense_report_demo_data.sql**, has been included in the Expense Report package. The SQL script will populate data in the tables created in the above step, allowing a preview of the application without populating your own data.

HEXAGON

Follow the above steps in Step 1 using the **2-expense_report_demo_data.sql** script to deploy the demo data.
