

## HOW TO: Execute the Quality Inspection App SQL Script

### Intent:

This document outlines how to deploy the accompanying Quality Inspection App SQL script.

### NOTE:

While Xalt is providing instruction on how to import and execute the included SQL scripts Hexagon, Xalt, Catavolt, take no responsibility for lost, corrupted, overwritten, or otherwise unintended data changes, due to incorrect or incomplete execution of the included instructions.

We HIGHLY recommend a Database Administrator complete these steps.

### Step 1.

#### How to Deploy 1-quality\_inspection\_schema.sql:

1. Right-click the destination database and select **New Query**. Or, from the **File** menu select **New Query**.
2. Open **1-quality\_inspection\_schema.sql** in notepad or your preferred text editor, select all and copy the contents in its entirety.
3. In the Query Editor window Right-click anywhere in the Query Editor and paste the contents **1-quality\_inspection\_schema.sql** into the Query Editor Window and click Execute.

Once all of these objects are imported we will be ready to import the Quality Inspection App import package into Xalt Cloud Server.

### OPTIONAL:

#### Step 2:

Another SQL Script, **2-quality\_inspection\_demo\_data.sql**, has been included in the Quality Inspection Package. The SQL script will populate data to the tables created in the above step, allowing developer to preview the application without populating their own data.

Follow the above steps in Step 1 using the **2-quality\_inspection\_demo\_data.sql** script to deploy the demo data.
